

**ADU73 Quickstart Guide**

1	Normal
2	Reserved
3	Reserved

	With One Channel Enabled	With Two Channels Enabled
1	2.5Hz (400ms)	1.25Hz (800ms)
2	5Hz (200ms)	2.5Hz (400ms)
3	20Hz (50ms)	10Hz (100ms)
4	100Hz (10ms)	50Hz (20ms)
5	200Hz (5ms)	100Hz (10ms)
6	500Hz (2ms)	250Hz (4ms)
7	1KHz (1ms)	500Hz (2ms)

0	AN0 Disabled
1	AN0 Enabled

0	AN1 Disabled
1	AN1 Enabled

**NOTES:**

1. Power on default word is WC1411. Configures mode to Normal, 100Hz sample rate, AN0 and AN1 enabled.
2. All digits must be specified, and valid, or entire WCnnnn command is ignored.
3. When WCnnnn command is sent, A/D is reset, configured, and a zero scale, and full scale internal calibration is performed. Data not available for up to 6 sample times.
4. In polling mode, when data is read at or below sample rate, every reading contains new data. Reading faster than the sample rate results in duplicate readings.

Full Scale = 16777215  
Zero Scale = 00000000

Noise increases with sample rate reducing the effective resolution. See table 2 for effective resolution at each sample rate.

**Table 1: ADU73 Configuration Word Worksheet**

## Table 2: ADU73 Resolution in Bits - Effective (p-p)

Sample Rate

		1	2	3	4	5	6	7	
<b>Mode</b>	<b>1</b>	Normal	Ratio-Metric 24(24)	Ratio-Metric 24(22.4)	Ratio-Metric 23.9(21.2)	Ratio-Metric 23.6(20.6)	Ratio-Metric 23.1(20.4)	Ratio-Metric 22.4(19.7)	Ratio-Metric 22.2(19.2)
			Absolute 24(23)	Absolute 23.4(22.7)	Absolute 23.2(20.2)	Absolute 22.8(20)	Absolute 22.3(19.6)	Absolute 22.1(19.2)	Absolute 21.9(18.8)

**Command Summary:**

- WCnnnn - Resets A/D, configures A/D, initiates zero scale and full scale calibration
- RC - Returns Present Configuration Number ( 4 bytes )
- RD0 - Returns present reading of AN0. ( 8 bytes, 00000000-16777215, includes leading zeros )
- RD1 - Returns present reading of AN0. ( 8 bytes, 00000000-16777215, includes leading zeros )
- RD - Returns present reading of AN0 and AN1. ( Two 8 byte numbers includes leading zeros, space (20H) delimiter)
- SS -Start Stream
- SC -Cancel Steam

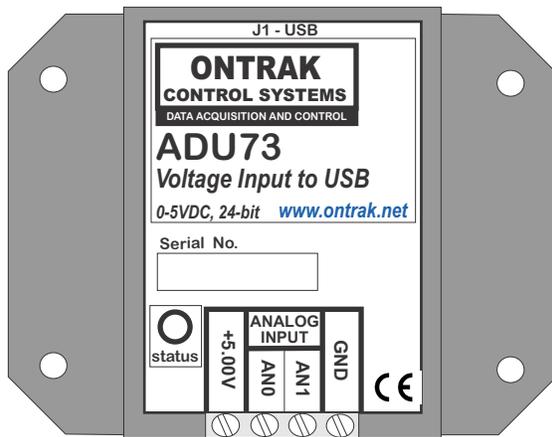

**Note:** Disabled channels return 00000000 regardless of input voltage level.

### Fig 1: ADU73 Stream Packet Format

**Note:** Stream packet is identical to response from RD command, but is received on the Streaming Pipe

### Fig 2 : Typical Application Example

TE Connectivity  
String Pot  
10K ohm

1. **WC1210** configures for normal operation with a sample speed of 5Hz, AN0 enabled, AN1 disabled, for an effective resolution of 24 bits.

2. **RD0** command returns reading from 00000000-16777215

**Channel AN0 Voltage** = ((reading/16777215) X 5.00)

**Channel AN0 Percent FS** = ((reading/16777215) X 100)

Reading is ratio-metric for best noise immunity.
